

SEABOURN®

An Update to Seabourn Guests

Every year we welcome thousands of guests who love the joy of cruising and the beauty and calm of the sea. The ocean is a cherished resource that we must all respect and one we are committed to preserving, protecting and promoting for future generations to enjoy.

Sustainability and environmental responsibility are issues many companies are regularly addressing today. Along with our sister brands that operate under the Carnival Corporation umbrella, we are making a concerted effort to enhance our sustainability practices so we can achieve our goal of being the environmental leaders you expect us to be. In this effort, the corporation has invested hundreds of millions of dollars in new technology, equipment and training to propel our environmental stewardship forward. We have made tremendous progress in reducing emissions, fuel consumption, water and energy usage, and many other metrics by which we measure our improvements.

As leaders in the cruise industry, we are committed to doing more, being ever vigilant, and moving faster with our plans. In recent months, you may have noticed changes to some of our product offerings as we move to reduce single use plastics and eliminate certain other items that are difficult to recycle or separate from food waste. It's important for you to know that these changes are focused on our being better environmental stewards – not cost reductions – as many of these changes actually increase our cost and the manpower required to execute them.

Some of these changes are underway, but you will see all of them in place by the end of this year, including:

- Replaced plastic straws and coffee cup lids with paper alternatives.
- Eliminating plastic cups for both guests and crew.
- Replaced plastic cocktail picks and stir sticks with bamboo and wood alternatives.
- Replacing plastic ice cream spoons with wood spoons.
- In addition to providing Nordaq-filtered still and sparkling water in all food and beverage venues, we are phasing in Nordaq-filtered still and sparkling water in reusable bottles, replacing single-use plastic bottled water for guests and crew.
- All single-use plastics continue to be reviewed across our fleet with the goal to reduce and eliminate them in guest and crew areas.

We are committed to doing our part to implement best practices and new technologies to reduce our environmental footprint. And, along with the support of our terrific crew and guests working together, we will do our part to protect the oceans we enjoy and the air that we breathe. We ask that you embrace these changes in the spirit in which they are being made and understand how these changes may limit how our team responds to certain requests. The one thing we are not changing is our commitment to providing you with the finest in luxury service and hospitality. Together, with your support, we will continue our progress as outstanding environmental stewards.
